PFAS Statement

In 2023, the European Chemicals Agency (ECHA) began a procedure to study the possibility of banning products that contain PFAS (perfluorinated and polyfluorinated chemicals) or PFOS (perfluorooctane sulfonic acid) due to their high polluting power. ISC declares that it does not use PFAS or PFOS at any point in the manufacturing and treatment process of its products.

Our catalog includes those items that contain PTFE (polytetrafluoroethylene), whose chemical composition makes it highly stable and, therefore, cannot decompose and become toxic. Thus, the OECD considers materials with PTFE as “products of low concern” and non-toxic.

The information provided by ISC does not relieve the customer of the duty of diligence, on whom the responsibility arising from the use of the purchased products will fall.

Any substantial change that occurs with respect to the aforementioned procedure or the current legislation on this matter will be duly notified.

Barcelone, January 2024
Francisco Dominguez
Quality Manager
